

# HTML

## The standard markup language for Web pages

For this tutorial, we're gonna be seeing three very useful tags for anyone who wants to get started with HTML.

## Headings

Tags go from <h1>(Most important) to <h6>(Less important), with each value defining how important the information you want to share is. This is useful to present things in a way that is visually more pleasant than just writing it using <p>.

```
<h1>
|   Curriculum Vitae
</h1>

<h2>
|   Datos personales
</h2>
```

## Images

You can insert images into your website using the tag <img>, along with **src**, which allows you to specify the path of the image.

```
, then separate each row with <tr>, and after that you separate each column with either <td> (if you want it to be centered), or <th> (if you want it to be left sided).

```
<table style="width: 100%;">
|   <tr>
|   |   <th><strong> Nombre producto </strong></th>
|   |   <th><strong> Precio unitario </strong></th>
|   |   <th><strong> Unidades </strong></th>
|   |   <th><strong> Subtotal </strong></th>
|   </tr>
</table>
```
